

"We are delighted to work with Sarsen Technology and expand our customer base in the UK and Ireland. We trust both their professionalism and their extensive knowledge of high-end FPGA boards and systems."

Eric Penain, Chief Business Officer
REFLEX CES

"Sarsen's forward thinking, coupled with their deep engineering knowledge, allows organisations like mine to offer solutions that far outstrip the current incumbent technology. Thanks to Sarsen's support we get to lead and not follow."

Matt Dangerfield, Director
Financial Technology Advisers

"Sarsen Technology offers a strong portfolio of embedded hardware products, backed by responsive, knowledgeable and friendly staff who are always keen to help wherever possible."

Jon Older, Director of Business Development

Rock-Solid Embedded COTS
Single Board Computing,
Graphics and Video, FPGA,
Timing Systems, MIL-STD-1553
and High-Performance
Networking Solutions.

Sarsen Technology is an industry-leading distributor of embedded COTS hardware and software solutions. Our clients are Europe's leaders in the high performance computing, telecommunications, Government, cyber security, instrumentation, financial trading, defence, research and aerospace markets.

We support a wide range of high quality, high reliability products on board formats including:

- | | |
|---------------|------------------|
| ✓ COM Express | ✓ PC/104 |
| ✓ CompactPCI | ✓ PCI Express |
| ✓ EBX | ✓ SOM |
| ✓ EPU | ✓ SOSA |
| ✓ FMC | ✓ Open VPX / VPX |
| ✓ MiniPCIe | ✓ XMC/PMC |

Ask us about our rugged monitors, 1553 Bus Couplers, Cable Assemblies, Terminators, Connectors, TRB Adapters and Tools...

Leading the way in delivering
high-technology embedded
hardware and software
solutions

Products

Our product lines have been chosen carefully to allow us to support a huge portfolio of high performance solutions and technologies.

Technologies

Wide range of form factors, processors, GPUs and FPGAs, including the Versal from AMD Xilinx, and the Agilex FPGA from Intel. High speed ADCs and DACs and RFSoc solutions are also available.

Manufacturers

Sarsen Technology represents a number of international manufacturers selected for their market leading technology and commitment to customer service.

Contact

Sarsen Technology provides local commercial and technical support for all of our product lines. Our **knowledgeable** team is available from 8.30am - 5pm GMT to support your application.

Innovative MIL-STD-1553, ARINC-429/717 and multi-protocol COTS communications products. Available on a full line of board form factors for almost any computer backplane, alongside Ethernet, Thunderbolt and USB appliances.

COTS FPGA and RFSoc-based systems and products for digital signal processing and high performance embedded computing for the military and commercial markets. Experts in 100GbE SOSA and OpenVPX technology.

Real-time, long-duration error free digital recording and playback COTS systems designed for environments where large volumes of high-speed data are generated. Includes PXI and RAID SSD storage solutions.

Complete embedded hardware and software solutions designed around a wide selection of SoMs and SBCs based on ARM and FPGA processors. Supported technology includes AMD Xilinx Zynq, NXP i.MX8, Linux and Android.

Rugged MIL-STD-810G and MIL-STD-461F certified, fanless computer systems driven by Intel Xeon and Core i7 CPUs for the Mil/Aero markets. Small form factor ITAR-free solutions.

COTS VPX, XMC and system level rugged high performance graphics, HEVC/H.265, H.264, GPGPU and video capture solutions based on the latest NVIDIA technology.

Rugged, embedded Intel and NXP processor-based solutions for compute-intensive military, commercial, and industrial applications. Rugged 3U and 6U VPX boards, XMC, VME, CompactPCI and 6U LRM solutions.

High performance analog, digital and serial I/O products and bus interface solutions based on a variety of form factors including PMC, PCI, VME, PC/104 and cPCI.

Extensive product portfolio of master clocks, time servers, count controllers, digital displays, analog clocks, and PC cards for mission critical applications.

Magmio is an FPGA-based system for ultra-low latency trading. The pure hardware solution enables you to trade at nanosecond-level latencies.

High-speed boards and rugged system level embedded FPGA technology solutions based on Intel FPGA or AMD Xilinx FPGA. COTS, modified COTS, or full turnkey designs.

State-of-the-art rugged x86 COTS embedded computers on industry standard form factors including PC/104, COM Express, EPU, EBX, EPIC and Mini PCIe.

Bringing you the world's best manufacturers for the optimum embedded systems solutions

If there is a specific requirement you would like to discuss please contact us on: +44 (0) 1672 511166 or send us an email – info@sarsen.net
